

DESKING

Coalesse Launched Lagunitas Focus Nook at NeoCon 2019

➤ Coalesse launched the Lagunitas Focus Nook, the first individual work alcove in the category-defining lounge collection by Toan Nguyen. A freestanding nook for solo work, it offers users a touch-down destination for performing focused tasks in a traditional work posture — optimizing space within the open plan, while allowing users to stay centered and free from distraction.

With its high screens in a signature Lagunitas knit pattern or fabric construction, the Focus Nook offers enriched color and warm design to invite personalization and expression. In a time when workplace floorplans must be flexible and adaptable, designers can place a single nook next to a social area or form a row of nooks adjacent to collaborative spaces, for the freedom to focus in the modern work mix.

PANELS

MergeWorks Releases EchoDeco Panels

➤ MergeWorks' new EchoDeco acoustic wall panel designs improve office acoustics while creating an inspiring environment. The decorative solution absorbs distracting noise, and the hanging panels are a cost-effective treatment to cover walls or divide space.

EchoDeco acoustical panels and partitions improve sound privacy by reducing room echo and absorbing sound, resulting in better focus, reduced distractions and stress. Studies have proven that uncontrolled noise contributes to a stressful environment.

The designs are cut into acoustic EchoScape material. EchoScape is a durable, high-quality polyester made from 60

percent post-consumer recycled plastic PET water bottles. It's lightweight, VOC Free, high impact resistant and tackable. A variety of designs are offered and customization is available.

"Manufacturing quality products at a cost-effective price point is our core mission," said Scott Klingler, MergeWorks CEO. "Our new EchoDeco acoustic panels are an effective and affordable solution to dampen ambient noise plus enhance the look of your work environment."

Made to order at a state-of-the-art facility in San Antonio, Texas, lead time for the standard EchoDeco acoustic panels is three weeks; custom design lead time may vary.
