

## Shaping Spaces for Learning

Disruptive noise is one of the top barriers to effective learning. MergeWorks acoustic solutions are designed to reduce distractions and improve speech clarity, helping students concentrate and educators communicate more effectively.

Our flexible, multi-functional designs combine acoustic control with privacy, collaborative features, and visual appeal, creating spaces that adapt to the lesson and inspire better academic outcomes.

# Privacy and Focus When It Matters Most

Libraries, study halls, and media centers are meant to be tranquil spaces that encourage exploration. Acoustic room and desk dividers absorb unwanted noise while creating cozy areas for focused study or collaborative work.

Classrooms demand flexibility. Our mobile and reconfigurable partitions easily transform open areas into defined learning zones, allowing educators to combine space division with interactive teaching tools.

Adding wall and ceiling acoustic treatments complete the solution, creating a peaceful, comfortable environment while enhancing the room's style, turning any learning space into one that encourages focus and creativity.

## Our Acoustic Materials Offer:

Material Thickness: 3/8" (9mm) & 3/4" (18mm)

**NRC Rated**  
0.85 & 0.9
